

# Bringing Bootstrap into your React App

- After creating your app project:
- `..Demo\second-app> npm install --save react-bootstrap bootstrap@3`
- Then start the app : `npm start`
- In `Index.js`, put these as the 1<sup>st</sup> 2 lines:
- `import 'bootstrap/dist/css/bootstrap.css';`
- `import 'bootstrap/dist/css/bootstrap-theme.css';`
- Now use Bootstrap classes in `App.js` or any other component:
- Eg :

```
render(){  
  return(  
    <div className="container">  
      <h1 className="text-danger">TODO LIST </h1>  
    </div>  
  );  
}
```
